**Subject:** FW: Factsheets ready for IOAA review  
**Attachments:** Ethylbenzene\_AO factsheet\_06-19-14-Clean.docx; Naphthalene\_AO factsheet\_06-19-14\_clean.docx; Benzoapyrene\_AO factsheet\_06-07-14\_track changes.docx; Ethylene Oxide Cancer AO factsheet\_06-07-14\_track changes.docx; Vanadium Pentoxide\_AO factsheet\_06-16-14\_CLEAN\_06-23-14\_track changes.docx; Vanadium Pentoxide\_AO factsheet\_06-16-14\_CLEAN\_06-23-14\_clean.docx

Friendly reminder about the AO factsheets.

- BaP and EtO are ready for IOAA review (BaP and EtO).
- Vince – you need to look at the problem formulation description in ethylbenzene and naphthalene – if you're okay with it, then these are also ready for IOAA review.
- I've attached a slightly updated version of the vanadium pentoxide factsheet to reflect that OSWER may be interested in the determination that there were inadequate data to derive an RfD (I attached both track changes and clean versions, but only the clean needs to go to Bob K since this is a brand new factsheet for him)

Ex. 5 Deliberative Process (DP)

my

apologies!

I'm working on the assumption that the IRIS division will take care of sending these to the IOAA for review (as we've discussed in the past).

**Subject:** FW: Factsheets ready for IOAA review

Hi Vince and Gina –

Just wanted to remind you about these factsheets. After today's vanadium pentoxide briefing, I need to update that factsheet (though I'm waiting on some information about the RfD/OSWER question that was raised this morning).

The revised factsheets of BaP and EtO are ready to go to the IOAA for review.

Vince – I need you to look at how we characterized scoping and problem formulation in the factsheets for ethylbenzene and naphthalene. If you're okay with it, then they are ready for IOAA review. If they are not, please send me a tracked changes version with your edits.

And as soon as you hear from OSWER about the vanadium/RfD question, let me know, and I'll make the appropriate updates to that factsheet.

Thanks.

**Subject:** Factsheets ready for IOAA review

Attached are two updated factsheets and three new factsheets. Some of these are ready for IOAA review. For two of them, I need confirmation from Vince that the information on scoping and problem formulation is consistent with what has been decided in the Program.

The updated factsheets are those for benzo[a]pyrene and ethylene oxide. These are both ready for IOAA review.

The new factsheets are for vanadium pentoxide (for the final posting step), ethylbenzene (scoping step), and naphthalene (scoping step). The factsheet for vanadium pentoxide is ready for IOAA review.

Vince – please look at the factsheets for ethylbenzene and naphthalene and make sure you're okay with how we've described scoping, problem formulation, and the materials that will be released soon. If you're okay with the descriptions, then they are also ready for IOAA review.

Will the IRIS Program send these to Bob K for review?
